

# 3-in-1 Security - Administration - Optimization

### O&O Education Security Suite

Data protection and data security are among the most important topics for educational institutions, students, and teachers when it comes to IT. The O&O Education Security Suite is well equipped to serve any security requirements with O&O DiskImage and O&O SafeErase.

The security concept for desktops, notebooks/netbooks and servers is supplemented by other tools that make it easier to monitor a hard drives' health status (O&O DriveLED), disk utilization (O&O DiskStat). In addition, O&O Defrag ensures long term performance and hard disk usage.

The single user license permits the use of products included on a single computer (desktop, mobile system or server). The Classroom License includes licenses for one server and 16 workstations. A School License allows for the unlimited use of the software included on all desktops and servers. The Classroom and School Licenses also include the central administration tool O&O Enterprise Management Console.

Contents	Single license	Classroom license 16 students / Workstations + 1 Teacher / Server	School License

#### License overview

- Single user license: Students, teachers and educational institutions (no clubs and charitable organizations)
- Classroom License: Public and accredited general and vocational schools (no clubs and charitable organizations)
- School License: Public and accredited general and vocational schools (no clubs and charitable organizations)

# 3-in-1 Security - Administration - Optimization

## O&O Defrag 17

Fragmented hard disks put the brakes on the servers in a company and as a result have an adverse affect on productivity. The level of fragmentation proportionally increases the time needed for accessing a hard disk. This in turn increases the amount of valuable time lost by each and every employee. The new O&O Defrag optimizes your hard disk and packs file fragments securely back together again. Thanks to clearly displayed graphics and statistics, you can monitor the success of regular defragmentation. After every run you get a graph showing the before-and-after stats. You can then base your configuration of the program on these statistics to optimize the success yet more.

## O&O DiskImage 8

Creating images of entire servers is one of the standard measures currently taken by companies for protecting their data and system configurations. O&O DiskImage Server Edition takes this once step further by providing features that make your job as an Administrator significantly easier. Among these features is a Job Assistant for remotely allocating jobs and the newly integrated file backup for individual files and folders.

## O&O DiskStat 2

With O&O DiskStat, you can easily search for files and folders that use a lot of space on your hard drive and slow your computer down. This versatile tool offers an intuitive interface similar to Windows-Explorer, and a variety of options to combat wasted space.

## O&O DriveLED 4

Hard drives are among the most highly-stressed components of your computer. Such strong demand may lead to a failure during operation, often without warning. O&O DriveLED permanently monitors the status of your hard drives in the background and warns you of impending problems. It allows you to recognize an impending failure and respond to it in time.

## O&O SafeErase 7

O&O SafeErase is the solution to permanently delete sensitive data from your hard drive and provides the ultimate protection of your privacy! O&O SafeErase doesn't only delete files, folders and partitions with one click, it annihilates them using approved and recommended methods. The integrated „O&O TotalErase“ Wizard also allows for the permanent deletion of an entire system including the system partition.

## O&O Enterprise Management Console 4

With the O&O Enterprise Management Console, you can manage O&O products from one central location in your network. It not only allows you to run tasks on individual computers or sites, but also to remotely install agents. All data is stored on one database so that you will always be informed by detailed reports on the success of the jobs.

### System requirements

Minimum requirement of each operating system  
1 GB RAM recommended  
50 MB free disk space  
Windows® XP to Windows® Server 2012 R2  
(all Editions 32/64 bit)
